Re: Step Therapy for Part B Drugs in Medicare Advantage

Dear Administrator Brooks-LaSure,

The undersigned organizations, representing millions of Medicare beneficiaries with life-threatening, complex, chronic conditions and/or the physicians who care for them, are asking the Centers for Medicare and Medicaid Services (CMS) to ensure that beneficiaries enrolled in Medicare Advantage plans continue to have appropriate and timely access to the therapies they need to properly manage their conditions. **We are asking that the agency move swiftly to reinstate the step therapy prohibition in Medicare Advantage (MA) plans for Part B drugs as described in the September 17, 2012, HPMS memo *Prohibition on Imposing Mandatory Step Therapy for Access to Part B Drugs and Services*.**

Step therapy and prior authorization are both forms of utilization management, and we share the concerns for MA beneficiary access to care described by the HHS Office of Inspector General (OIG) in their report, *Some Medicare Advantage Organization Denials of Prior Authorization Requests Raise Concerns About Beneficiary Access to Medically Necessary Care*. As highlighted by the OIG report, although some of denials are ultimately reversed by MA organizations, negative consequences from avoidable delays in medically necessary care are not absolved.¹ Critical delays in obtaining the best medicines for the best outcomes may ultimately lead to increased costs for the Medicare program and its beneficiaries as well.

Our groups were disappointed by the rescission of this important prohibition by the previous administration. Since step therapy has been allowed for Part B drugs since 2019 there have been multiple cases of patient harm. In September 2021, several groups presented CMS leaders with clear instances of patient harm that resulted in, but were not limited to, patients becoming legally blind, long-term hospitalizations, infections, increased disease activity, and disability. We appreciate that CMS took the time to meet with patient and physician stakeholder groups and listen to our testimony; however, **we are concerned that step therapy remains permissible, and patients continue to be harmed by the practice.**

Part B drugs treat some of the most vulnerable Medicare beneficiaries, which makes step therapy a health equity issue. Recent analysis of Medicare beneficiary demographic characteristics shows that MA

enrollees are disproportionately lower-income, Black or Latino, and dually enrolled in Medicaid when compared to traditional fee-for-service enrollees.² As long as Medicare Advantage plans are allowed to use step therapy, patients treated under these private for-profit MA plans are deprived of the same health care that those in fee-for-service receive.

There have been numerous cases of patient harm due to the utilization of step therapy protocols and the beneficiaries receiving Part B covered drugs include some of the most vulnerable in the program. As enrollment in MA plans rapidly grows, including Special Needs Plans³, the need to address this barrier to care becomes ever more urgent. With that in mind, **we urge the administration to protect patients' access to care and expeditiously reverse the harmful decision to allow MA plans to implement step therapy.**

We look forward to working with CMS to ensure Medicare beneficiaries have timely access to life-changing therapies. To discuss this matter further or schedule a meeting, please have your staff contact Brandy Keys, MPH, American Academy of Ophthalmology's Director of Health Policy at bkeys@aao.org or via phone at 202-737-6662.

² Analysis by the by the Office of the Assistant Secretary for Planning and Evaluation on 2019 enrollment data shows that beneficiaries enrolled in MA were more likely to report incomes below 100% FPL (17.6 percent vs. 14.6 percent), be 75 or older (39.6 percent vs. 37.5 percent), and have educational attainment less than high school (17.5 percent vs. 12.3 percent). MA included a higher percent of Black and Latino beneficiaries (13.7 percent and 10.6 percent) than in FFS Parts A and B (8.5 percent and 5.2 percent, respectively). MA enrollees were more likely than FFS enrollees to be dually enrolled (20.1 percent vs. 16.5 percent) and to have multiple health conditions (34.2 percent vs. 25.4 percent).

³ From 2000 to 2021 enrollment in Medicare Advantage Plans grew from 7 million to 26 million enrollees (73% increase). Special Needs Plans accounted for about 15% of total Medicare Advantage enrollment in 2021.
